

FPDI PROJECT SPOTLIGHT

FARM TOOLKIT

FOOD AND AGRICULTURE READINESS MEASUREMENT TOOLKIT

The FARM Toolkit is a measurement tool designed to enable food-sector stakeholders to improve their Mission Areas and Core Capabilities in the event of a food emergency. Based on Presidential Policy Directive 8 and NASDA's Food Emergency Response Plan, FARM Toolkit aims to strengthen food emergency preparedness.

The FARM Toolkit enables participants to periodically compare progress from the foundational levels established when the tool is first used. The tool provides a common structure and approach for developing and assessing food-related capabilities, so stakeholders can measure their progress on preparedness over time.

“ Continuous changes to the food system make it vulnerable to economically motivated adulteration, natural disasters, foodborne illness outbreaks, and intentional contamination highlighting the importance of preparedness for all food contingencies. ”

HOW TO ACCESS SURVEY

Each state has a unique short link: (<https://go.foodshield.org/?farmXX>), XX= state abbreviation

Option 1

Use the shortlink and log into FoodSHIELD to request access to the FARM Workgroup (automatically direct to the state, not national). FPDI will approve access and send an e-mail to take the survey.

Option 2

FPDI can add individuals to the state workgroup ahead of time. Use the state short link, log into FoodSHIELD and go directly to the survey.
